Key areas of the organization secured with Microsoft tools

User security

Securing correspondence with **Exchange Online Protection**, secure links and attachments provided by **Office 365 Advanced Threat Protection**, multi-component login to devices and applications via the **Azure MFA** or **Azure Information Protection** mechanism that guarantees control over shared resources and secures employees against external threats.

Workstation and machines security

Windows 10 Enterprise is the basis for a safe **BitLocker** workstation for encrypting the disk and its contents **Microsoft Defender ATP** to protect the machines in real time with full reporting of activity and security incidents. **Azure Application Proxy** will allow you to run applications securely while **Microsoft Intune** will provide remote device management for administrators.

Email Security Certificate

Communication is supported by a certified correspondence security mechanism. It **ensures security** of company data, maintains confidentiality of correspondence, and electronically confirms the sender identity. It is recognized by business partners and customers as a care for the highest level of security.

Organization security

Azure Active Directory is the basis for employees' management in the whole organization. **Azure Log Analytics** collects activity and reports events, **Azure Advanced Threat Protection** collects signals and provides insight into incidents, and **Azure Sentinel (SIEM)** allows to manage events and security information from every place in your organization.

We care about full security of the employees and data

Audit of current solutions and needs.

We analyze the current security level in the organization, learn its work characteristics as well as the scope and way of processing data.

Choosing tools and implementation schedule.

We select solutions and packages from the Microsoft security product catalog that will secure the organization and its employees to the highest degree.

Pilot implementation and configuration optimization.

We launch PoC with chosen tools to a narrow group of so-called early adopters, collect feedback and optimize settings.

Security for the whole organization

We implement security for the whole organization, provide post-implementation support for the IT department and access to the knowledge of our engineers.

Start cooperation with a trusted **Microsoft Partner** in the field of cloud security and free your mind to concentrate on developing your business.
