

# IBM Security Services for Cloud

Protecting the hybrid multi-cloud

Presenter's name

Title

Cloud has  
turned traditional  
cybersecurity on its  
head

of cloud security  
failures will be the  
organization's fault

\$474  
Billion

Global Cloud  
Revenue to Total  
\$474 Billion in  
2022\*

A blue triangle with a white exclamation mark inside.

\$3.8M

Global average  
cost of a data  
breach

of world's stored  
data expected to  
reside in public  
cloud by 2025

## Unanticipated Acceleration to Cloud

Pandemic accelerated change  
and demand to allow users to  
access the enterprise from  
anywhere using any device

## Regulatory Compliance Churn & Governance

With the migration of workloads to  
the Cloud, Security, and  
compliance are top-of-mind  
across hybrid multi-cloud  
environments

## Disparate Controls & Decentralized Management

New computing approaches, including  
Edge & multi-cloud, require robust  
security platforms that can deploy  
controls consistently & seamlessly

## Growing Attack Surface & Threat Landscape

Growing threats, tools and data  
inhibit security operations across  
hybrid environments

# Securing the hybrid enterprise requires a comprehensive cloud security program

**01**

Defining and implementing a Cloud Security Strategy  
*Comprehensive, Consistent & Zero Trust Centric*

**02**

Enforcing policies to protect cloud resources

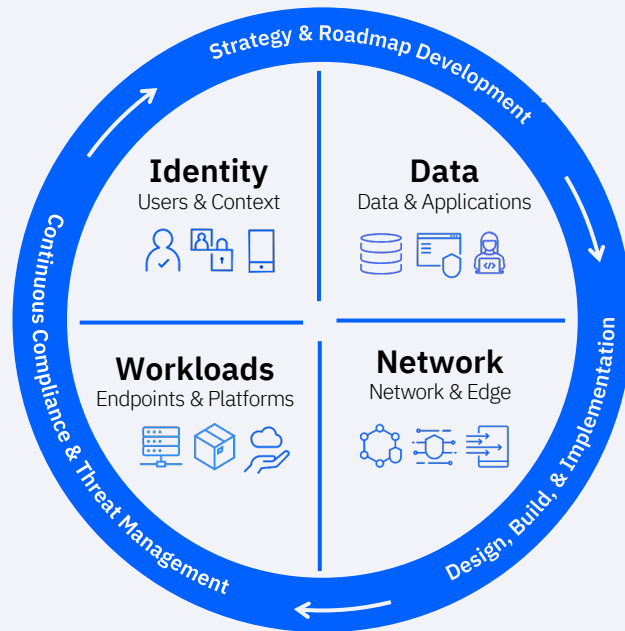

**03**

Ensuring security posture & compliance needs are continually met

**04**

Centralizing detection & response to threats 24x7

# IBM Security Services for Cloud Services Framework

## Services & Delivery Models

### Advisory

- Cloud Security Assessment
- Cloud Security Strategy

### Integration

- Secure Cloud Foundations

### Managed

- Cloud Native Security Services
- Cloud, SaaS Posture and Workload Protection

### Retainer

- Secure Cloud Foundations
- X-Force Incident Response
- Post Breach Response

### Tailored

- Address customer specific Hybrid Cloud requirements

## NIST CSF Alignment

# Strategy and Roadmap Development

## End-to-End Visibility

Visibility into current state cloud configuration and mitigation steps to address cloud compliance gaps

## Enhanced Governance with Actionable Reporting

Review cloud security maturity in alignment with business goals and enterprise governance framework

## Efficient Operations

Develop target operating model and prioritized implementation roadmap for securing cloud

## Innovative Approach

Build innovative business solutions and next-generation business processes at scale

**Cloud  
Security  
Strategy**

Assess, align, and implement the security strategy designed to meet the organization's business, security and compliance goals

### Key Delivery Activities

#### Rapid Cloud Assessment

- Review cloud configuration, compliance and network activity
- Scan posture of security controls and up-to 5 compliance frameworks

#### Advanced Current State Assessment

- Review scan reports and assess security posture and maturity tailored as per industry/geos
- Align cloud usage to business goals and enterprise governance framework

#### Security Strategy and Plan

- Identify gaps and develop conceptual target state
- Define priority projects
- Create cloud security strategy plan, and roadmap

#### Solution Implementation

- Review security strategy and plan to define accelerated deployment and migration options
- Implement security initiatives

### Deliverables

- Executive Review
- Detailed remediation actions to harden cloud security controls

- Current state findings report and next step recommendations
- Security controls and workload sensitivity map

- Cloud security maturity ratings
- Target state conceptual views
- Project definitions and prioritization
- High-level roadmap

- Customized deliverables based on client needs and project objectives
- Implementation and governance of cloud security initiatives

Microsoft Azure, hybrid cloud

**Cloud Security Strategy**  
*Cloud Security Threat Modeling  
& Architecture Analysis*

## The Client Challenge:

- Customer in process of modernizing their flight systems to a multi cloud architecture.
- Before transitioning, they must understand the security risks being faced by the new multi cloud systems, along with connections to third party partners.
- Developing a cloud native application brings a new approach and mindset shift, which can leave various security risks to arise.
- Additionally, they need to understand their current state security posture to understand where there can improve the new flight system application.

### The Bottom Line: :

Customer facing lack of understanding of current threats, developing new cloud native applications securely, and working with multiple third-party connections.

## The IBM Solution:

Our team was able to partner with the software team to work directly on security for an important customer cloud application.

IBM Security Services for Cloud capabilities and experience working with previous customers helped the customer application team understand their current threat landscape.

The importance and demonstration provided by the IBM team of conducting a threat modelling exercise to remediate low hanging fruit before moving to production, helped drive confidence for the customer moving forward.

Multinational Retail  
Apparel

2021

Microsoft Azure and  
hybrid cloud

**Cloud Security Strategy**  
*Rapid Cloud Security  
Assessment*

## The Client Challenge:

Customer had over 31K unique resources, across 18 cloud accounts/subscriptions, across 2 different cloud environments

### The Bottom Line:

Customer needed to quickly assess the current implementation of their Microsoft Azure and hybrid cloud environments for cloud inventory, safe configurations, and compliance visibility

## The IBM Solution:

The IBM SSC team conducted a rapid cloud security assessment against the customer's environment and covering their 31K+ cloud resources.

Safe configuration and compliance checks were ran against the onboarded accounts, and a follow-up review with key customer stakeholders across the regions was held to discuss preliminary findings

Validated assessment results and prepared final findings summary and detailed report included remediation recommendations were submitted by region for final review

# Get to value faster with a strong enterprise cloud security partner

**Microsoft**  
Gold  
Consulting  
Partner

## Microsoft Azure Cloud certified professionals across the globe

- Consulting & Systems Integration
- Managed Security Services
- Solution Design
- Product Management & Engineering

## Vendor and cloud agnostic expertise & support

- **Multi-cloud managed security services** providing centralized visibility, management, and monitoring of security operations across hybrid environments.
- Built on an ecosystem of best-of-breed security technologies, spanning **cloud-native & 3<sup>rd</sup> party**.

## Comprehensive support for hybrid multi-cloud

- Leading portfolio of **comprehensive cloud strategy & risk consulting capabilities** coupled with strong security strategy, integration & operations expertise.
- **Recognized by leading analyst firms as leader in MSSP space.** Known for deep cloud relevant innovation and comprehensive threat management services.
